

### EXERCISE 7.1

1. Express the following percentages as fractions:

(i) 356%

(ii)  $2\frac{1}{2}\%$

(iii)  $16\frac{2}{2}\%$

**Solution:**

(i) 356%

It can be written as

$$= \frac{356}{100}$$

By further simplification

$$= \frac{89}{25}$$

$$= 3\frac{14}{25}$$

(ii)  $2\frac{1}{2}\%$

It can be written as

$$= \frac{5}{2}\%$$

By further calculation

$$= \frac{5}{2 \times 100}$$

$$= \frac{1}{40}$$

(iii)  $16\frac{2}{3}\%$

It can be written as

$$= \frac{50}{3}\%$$

By further calculation

$$= \frac{50}{3} \times \frac{1}{100}$$

$$= \frac{1}{6}$$

2. Express the following fractions as percentages:

(i)  $\frac{3}{2}$

(ii)  $\frac{9}{20}$

(iii)  $1\frac{1}{4}$

**Solution:**

(i)  $\frac{3}{2}$

It can be written as

$$= \frac{3}{2} \times 100\%$$

$$= 150\%$$

(ii)  $\frac{9}{20}$

It can be written as

$$= \frac{9}{20} \times 100\%$$

$$= 45\%$$

(iii)  $1\frac{1}{4}$

It can be written as

$$= \frac{5}{4} \times 100\%$$

$$= 125\%$$

3. Express the following fractions as decimals. Then express the decimals as percentages:

(i)  $\frac{3}{4}$

(ii)  $\frac{5}{8}$

(iii)  $\frac{3}{16}$

**Solution:**

(i)  $\frac{3}{4} = 0.75$

It can be written as

$$\frac{3}{4} = \frac{3}{4} \times 100\%$$

By further calculation

$$= 3 \times 25\%$$

$$= 75\%$$

(ii)  $\frac{5}{8} = 0.625$

It can be written as

$$\frac{5}{8} = \frac{5}{8} \times 100\%$$

By further calculation

$$= \frac{5}{2} \times 25\%$$

$$= \frac{125}{2}\%$$

$$= 62.5\%$$

(iii)  $\frac{3}{16} = 0.1875$

It can be written as

$$\frac{3}{16} = \frac{3}{16} \times 100\%$$

By further calculation

$$= \frac{3}{4} \times 25\%$$

$$= \frac{75}{4}\%$$

$$= 18.75\%$$

4. Express the following fractions as decimals correct to four decimal places. Then express the decimals as percentages:

(i)  $\frac{2}{3}$

(ii)  $\frac{5}{6}$

(iii)  $\frac{4}{7}$

**Solution:**

(i)  $\frac{2}{3} = 0.6667$

By correcting to four decimal places

$$\frac{2}{3} = 0.6667 \times 100\% = 66.67\%$$

ML Aggarwal Solutions for Class 8 Maths Chapter 7 -  
Percentage

$$\begin{array}{r} 3 \overline{) 20} \quad 0.66666 \\ \underline{18} \\ 20 \\ \underline{18} \\ 20 \\ \underline{18} \\ 20 \\ \underline{18} \\ 20 \\ \underline{18} \\ 20 \\ \underline{18} \\ 2 \end{array}$$

(ii)  $5/6 = 0.8333$

By correcting to four decimal places

$$5/6 = 0.8333 \times 100\% = 83.33\%$$

$$\begin{array}{r} 6 \overline{) 50} \quad 0.83333 \\ \underline{48} \\ 20 \\ \underline{18} \\ 20 \\ \underline{18} \\ 20 \\ \underline{18} \\ 20 \\ \underline{18} \\ 20 \\ \underline{18} \\ 2 \end{array}$$

(iii)  $4/7 = 0.5714$

By correcting to four decimal places

$$4/7 = 0.5714 \times 100\% = 57.14\%$$

$$\begin{array}{r} 7 \overline{) 40000} \quad 0.5714 \\ \underline{35} \\ 50 \\ \underline{49} \\ 10 \\ \underline{7} \\ 30 \\ \underline{28} \\ 2 \end{array}$$

5. Express the following ratios as percentages:

(i) 17: 20

**(ii) 13: 18**

**(iii) 93: 80**

**Solution:**

(i) 17: 20

It can be written as

$$17: 20 = 17/20$$

By further calculation

$$= 17/20 \times 100\%$$

So we get

$$= 17 \times 5\%$$

$$= 85\%$$

(ii) 13: 18

It can be written as

$$13: 18 = 13/18$$

By further calculation

$$= 13/18 \times 100\%$$

So we get

$$= 13/9 \times 50\%$$

$$= 650/9 \%$$

$$= 72 \frac{2}{9}\%$$

(iii) 93: 80

It can be written as

$$93: 80 = 93/80$$

By further calculation

$$= 93/80 \times 100\%$$

So we get

$$= 93/4 \times 5\%$$

$$= 465/4\%$$

$$= 116.25 \%$$

**6. Express the following percentages as decimals:**

**(i) 20%**

**(ii) 2%**

**(iii) 3 ¼ %**

**Solution:**

(i) 20%

It can be written as

$$= 20/100$$

So we get

$$= 0.20$$

$$= 0.2$$

(ii) 2%

It can be written as

$$= 2/100$$

So we get

$$= 0.02$$

(iii)  $3\frac{1}{4}$

It can be written as

$$= \frac{13}{4}$$

Multiply the denominator by 100

$$= \frac{13}{(4 \times 100)}$$

$$= \frac{13}{400}$$

By further calculation

$$= \frac{3.25}{100}$$

$$= 0.325$$

**7. Find the value of:**

(i) 27 % of ₹ 50

(ii)  $6\frac{1}{4}$  % of 25 kg

**Solution:**

(i) 27 % of ₹ 50

It can be written as

$$= \frac{27}{100} \text{ of } ₹50$$

By further calculation

$$= \frac{27}{100} \times 50$$

So we get

$$= \frac{27}{2}$$

$$= ₹ 13.50$$

(ii)  $6\frac{1}{4}$  % of 25 kg

It can be written as

$$= \frac{25}{4}\% \text{ of } 25 \text{ kg}$$

By further calculation

$$= \frac{25}{(4 \times 100)} \text{ of } 25 \text{ kg}$$

$$= \frac{(25 \times 25)}{(4 \times 100)}$$

So we get

$$= \frac{25}{16}$$

$$= 1\frac{9}{16} \text{ kg}$$

**8. What percent is:**

(i) 300 g of 2 kg

(ii) ₹ 7.50 of ₹ 6

**Solution:**

(i) Required percentage =  $[\frac{300 \text{ gram}}{2 \text{ kg}} \times 100] \%$

It can be written as

$$= [\frac{300 \text{ gram}}{(2 \times 1000 \text{ gram})} \times 100] \%$$

By further calculation

$$= [\frac{300}{(2 \times 1000)} \times 100] \%$$

So we get

$$= (\frac{30}{2}) \%$$

$$= 15 \%$$

(ii) Required percentage =  $[\frac{₹ 7.50}{₹ 6} \times 100] \%$

It can be written as

$$= [\frac{7.50}{6} \times 100] \%$$

By further calculation

$$= [\frac{7.50}{3} \times 50] \%$$

So we get

$$= [2.50 \times 50] \%$$

$$= 125\%$$

**9. What percent of:**

**(i) 50 kg is 65 kg**

**(ii) ₹ 9 is ₹ 4**

**Solution:**

(i) Consider x% of 50 kg as 65 kg

$$x\% \text{ of } 50 \text{ kg} = 65 \text{ kg}$$

It can be written as

$$x/100 \times 50 = 65$$

By further calculation

$$x/2 = 65$$

By cross multiplication

$$x = 130$$

Therefore 130% of 50 kg is 65 kg.

(ii) Consider x% of ₹ 9 is ₹ 4

$$x\% \text{ of } ₹ 9 = ₹ 4$$

It can be written as

$$x/100 \times 9 = 4$$

By further calculation

$$x = 4 \times 100/9$$

So we get

$$x = 400/9$$

$$x = 44 \frac{4}{9}$$

Therefore,  $44 \frac{4}{9} \%$  of ₹ 9 is ₹ 4.

**10. (i) If  $16 \frac{2}{3} \%$  of a number is 25, find the number.**

**(ii) If 13.25 % of a number is 159, find the number.**

**Solution:**

(i) Consider the number as x

$$16 \frac{2}{3} \% \text{ of } x = 25$$

By further calculation

$$50/3 \% \text{ of } x = 25$$

It can be written as

$$50/3 \times 1/100 \text{ of } x = 25$$

So we get

$$x = (25 \times 3 \times 100)/50$$

$$x = 150$$

Therefore, the number is 150.

(ii) Consider the number as  $x$

$$13.25\% \text{ of } x = 159$$

It can be written as

$$13.25/100 \text{ of } x = 159$$

By further calculation

$$x = (159 \times 100) / 13.25$$

Multiply and divide by 100

$$x = (159 \times 100 \times 100) / 1325$$

So we get

$$x = (159 \times 4 \times 100) / 53$$

$$x = 3 \times 4 \times 100$$

$$x = 1200$$

Therefore, the number is 1200.

**11. (i) Increase the number 60 by 30 %**

**(ii) Decrease the number 750 by 10%**

**Solution:**

(i) New number =  $(1 + 30/100)$  of 60

By further calculation

$$= (1 + 3/10) \times 60$$

So we get

$$= 13/10 \times 60$$

$$= 78$$

(ii) New number =  $(1 - 10/100)$  of 750

By further calculation

$$= (1 - 1/10) \times 750$$

So we get

$$= 9/10 \times 750$$

$$= 9 \times 75$$

$$= 675$$

**12. (i) What number when increased by 15% becomes 299?**

**(ii) On decreasing the number by 18%, it becomes 697. Find the number.**

**Solution:**

(i) Consider the original number as  $x$

Here

New number =  $(1 + 15/100)$  of original number

Substituting the values

$$299 = (1 + 3/20) \times x$$

Taking LCM

$$299 = [(20 + 3) / 20] \times x$$

By further calculation

$$299 = 23/20 \times x$$

So we get

$$\begin{aligned}x &= (299 \times 20) / 23 \\x &= 13 \times 20 \\x &= 260\end{aligned}$$

Therefore, the original number is 260.

(ii) Consider the original number as  $x$   
Here

New number =  $(1 - 18/100)$  of original number

Substituting the values

$$697 = (1 - 18/100) \text{ of } x$$

Taking LCM

$$697 = [(100 - 18) / 100] \times x$$

By further calculation

$$697 = 82/100 \times x$$

So we get

$$x = (697 \times 100) / 82$$

$$x = (697 \times 50) / 41$$

By further simplification

$$x = 17 \times 50$$

$$x = 850$$

Therefore, the original number is 850.

**13. Mr. Khanna spent 83% of his salary and saved ₹ 1870. Calculate his monthly salary.**

**Solution:**

It is given that

Mr. Khanna spent 83% of his salary

$$\text{Savings} = 100 - 83 = 17\%$$

So 17% of his salary = ₹ 1870

We know that

$$\begin{aligned}\text{His salary} &= ₹ (1870 \times 100) / 17 \\ &= ₹ 11000\end{aligned}$$

**14. In school, 38% of the students are girls. If the number of boys is 1023, find the total strength of the school.**

**Solution:**

It is given that

No. of girls in school = 38%

No. of boys in school =  $(100 - 38) \% = 62\%$

Consider  $x$  as the total strength of school

$$62\% \text{ of } x = 1023$$

It can be written as

$$62/100 \times x = 1023$$

By further calculation

$$x = 1023 \times 100/62$$

So we get

$$x = 1023 \times 50/31$$

$$x = 33 \times 50$$
$$x = 1650$$

Therefore, the total strength of the school is 1650.

**15. The price of an article increases from ₹ 960 to ₹ 1080. Find the percentage increase in the price.**

**Solution:**

It is given that

$$\text{Increase in the price of an article} = 1080 - 960 = ₹ 120$$

We know that

$$\text{Percentage increase in the price} = 120/960 \times 100\%$$

By further calculation

$$= 1/8 \times 100\%$$

So we get

$$= 100/8 \%$$

$$= 25/2 \%$$

$$= 12.5 \%$$

**16. In a straight contest, the loser polled 42% votes and lost by 14400 votes. Find the total number of votes polled. If the total number of eligible voters was 1 lakh, find what percentage of voters did not vote.**

**Solution:**

It is given that

Losing candidate got 42% of the votes polled

$$\begin{aligned} \text{Votes secured by winning candidate} &= (100 - 42) \% \text{ of the votes polled} \\ &= 58 \% \text{ of the votes polled} \end{aligned}$$

$$\begin{aligned} \text{So the difference of votes} &= 58\% - 42\% \\ &= 16\% \text{ of the votes polled} \end{aligned}$$

We know that

$$16\% \text{ of the votes polled} = 14400$$

$$16\%/100 \text{ of the votes polled} = 14400$$

$$\text{So the votes polled} = 14400 \times 100/16$$

By further calculation

$$= 900 \times 100$$

$$= 90000$$

Here

$$\text{Total number of eligible voters} = 100000$$

$$\begin{aligned} \text{No. of voters who did not vote} &= 100000 - 90000 \\ &= 10000 \end{aligned}$$

$$\text{Percentage of voters did not vote} = [10000/100000 \times 100] \%$$

By further calculation

$$= 10000/1000 \%$$

$$= 10 \%$$

**17. Out of 8000 candidates, 60% were boys. If 80% of the boys and 90% of the girls passed the exam, find the number of candidates who failed.**

**Solution:**

It is given that

Total number of candidates = 8000

No. of boys = 60% of 8000

By further calculation

$$= \frac{60}{100} \times 8000$$

So we get

$$= 60 \times 80$$

$$= 4800$$

$$\text{No. of girls} = 8000 - 4800 = 3200$$

No. of passed boys = 80% of No. of boys

It can be written as

$$= \frac{80}{100} \times 4800$$

So we get

$$= 80 \times 48$$

$$= 3840$$

No. of passed girls = 90% of No. of girls

It can be written as

$$= \frac{90}{100} \times 3200$$

So we get

$$= 90 \times 32$$

$$= 2880$$

$$\text{No. of passed candidates} = 3840 + 2880 = 6720$$

$$\text{No. of failed candidates} = 8000 - 6720 = 1280$$

Therefore, the number of candidates who failed is 1280.

**18. In an exam,  $\frac{1}{4}$  of the students failed both in English and Maths, 35% of the students failed in Maths and 30% failed in English.**

**(i) Find the percentage of students who failed in any of the subjects.**

**(ii) Find the percentage of students who passed in both subjects.**

**(iii) If the number of students who failed only in English was 25, find the total number of students.**

**Solution:**

Consider the total number of students =  $x$

No. of students who failed both in English and Maths =  $\frac{1}{4}$  of  $x = \frac{x}{4}$

No. of students who failed in Maths = 35% of  $x$

It can be written as

$$= \frac{35}{100} \text{ of } x$$

By further calculation

$$= \frac{7}{20} \times x$$

$$= \frac{7x}{20}$$

## ML Aggarwal Solutions for Class 8 Maths Chapter 7 - Percentage

No. of students who failed in English = 30% of  $x$

It can be written as

$$= 30/100 \times x$$

By further calculation

$$= 3/10 \times x$$

$$= 3x/10$$

(i) No. of students who failed in any of the subject =  $(7x/20 + 3x/10) - x/4$

Taking LCM

$$= (7x + 6x)/20 - x/4$$

So we get

$$= (13x - 5x)/20$$

$$= 8x/20$$

Percentage of students who failed in any of the subject =  $8x/20/x \times 100\%$

We can write it as

$$= 8x/20 \times 1/x \times 100\%$$

By further calculation

$$= 8 \times 1 \times 5\%$$

$$= 40\%$$

(ii) Percentage of students who passed in both the subjects =  $100 - 40 = 60\%$

(iii) It is given that

No. of students who failed only in English = 25

We can write it as

$$3x/10 - x/4 = 25$$

No. of students who failed only in English =  $3x/10 - x/4$

Taking LCM

$$(6x - 5x)/20 = 25$$

By further calculation

$$x = 25 \times 20$$

$$x = 500$$

Therefore, the total number of students is 500.

**19. On increasing the price of an article by 16%, it becomes ₹ 1479. What was its original price?**

**Solution:**

Consider the original price of an article = ₹  $x$

$1479 = (1 + 16/100)$  of original price

It can be written as

$$1479 = [(100 + 16)/100] \times ₹ x$$

By further calculation

$$1479 = 116/100 \times x$$

So we get

$$116x/100 = 1479$$

By separating the terms

$$x = (1479 \times 100)/116$$

$$x = (1479 \times 25)/29$$

By division  
 $x = 51 \times 25$   
 $x = 1275$

Therefore, the original price of an article is ₹ 1275.

**20. Pratibha reduced her weight by 15%. If now she weighs 59.5 kg, what was her earlier weight?**

**Solution:**

It is given that

Weight reduced by Pratibha = 15%

Present weight of Pratibha = 59.5 kg

Consider her original weight = 100

Reduced weight =  $100 - 15 = 85\%$

Here

85% of her original weight = 59.5 kg

So her original weight =  $(59.5 \times 100) / 85$

By further calculation

=  $0.7 \times 100$

= 70 kg

**21. In a sale, a shop reduces all its prices by 15%. Calculate:**

**(i) the cost of an article which was originally priced at ₹ 40.**

**(ii) the original price of an article which was sold for ₹ 20.40.**

**Solution:**

It is given that

Rate of reduction = 15%

(i) Original price of an article = ₹ 40

Rate of reduction = 15%

By further calculation

Reduction =  $(40 \times 15) / 100 = ₹ 6$

So the sale price =  $40 - 6 = ₹ 34$

(ii) Sale price = ₹ 20.40

Rate of reduction = 15%

We know that

Cost price =  $(SP \times 100) / (100 - \text{reduction } \%)$

Substituting the values

=  $(20.40 \times 100) / (100 - 15)$

By further calculation

=  $(2040 \times 100) / (100 \times 85)$

= ₹ 24

**22. Increase the price of ₹ 200 by 10% and then decrease the new price by 10%. Is the final price same as the original one?**

**Solution:**

It is given that

Rate of increase = 10%

Rate of decrease = 10%

Price of article = ₹ 200

Here

Increased price = ₹ 200 × (100 + 10)/ 100

By further calculation

= ₹ 200 × 110/100

= ₹ 220

We know that

Decreased price = ₹ 200 × (100 – 10)/ 100

So we get

= ₹ 220 × 90/100

= ₹ 198

No, the final price is not as same as the original one.

**23. Chandani purchased some parrots. 20% flew away and 5% died. Of the remaining, 45% were sold. Now 33 parrots remain. How many parrots had Chandani purchased?**

**Solution:**

Consider Chandani purchased x parrots

No. of parrots flew away = 20% of x

It can be written as

= 20/100 × x

So we get

= 1/5 × x

= x/5

No. of parrots died = 5% of x

It can be written as

= 5/100 × x

= x/20

No. of parrots remaining = x – (x/5 + x/20)

Taking LCM

= x – [(4x + x)/ 20]

By further calculation

= x – 5x/20

= x – x/4

Taking LCM

= (4x – x)/ 4

= 3x/4

No. of sold parrots = 45% of 3x/4

It can be written as

= 45/100 × 3x/4

By further calculation

$$= 9/20 \times 3x/4$$
$$= 27x/80$$

No. of parrots which are not sold =  $3x/4 - 27/80$

Taking LCM

$$= (60x - 27x)/ 80$$
$$= 33x/80$$

Based on the question

$$33x/80 = 33$$

By cross multiplication

$$33x = 33 \times 80$$

So we get

$$x = (33 \times 80)/ 33$$

$$x = 80$$

Therefore, Chandani purchased 80 parrots.

**24. A candidate who gets 36% marks in an examination fails by 24 marks but another candidate, who gets 43% marks, gets 18 more marks than the minimum pass marks. Find the maximum marks and the percentage of pass marks.**

**Solution:**

Consider x as the maximum marks

Marks secured by the first candidate = 36% of x

It can be written as

$$= 36/100 \times x$$

$$= 36x/ 100$$

Marks secured by another candidate = 43% of x

It can be written as

$$= 43/100 \times x$$

$$= 43x/ 100$$

The qualifying marks are same for both the candidates

So according to the question

$$36x/100 + 24 = 43x/100 - 18$$

By further calculation

$$24 + 18 = 43x/100 - 36x/ 100$$

Taking LCM

$$42 = (43x - 36x)/ 100$$

$$42 = 7x/100$$

By cross multiplication

$$x = 42 \times 100/7$$

$$x = 6 \times 100$$

$$x = 600$$

Here the maximum marks = 600

Marks secured by first candidate =  $36/100 \times 600 = 36 \times 6 = 216$

Qualifying marks =  $216 + 24 = 240$

## ML Aggarwal Solutions for Class 8 Maths Chapter 7 - Percentage

So the percentage of qualifying marks =  $(240/600 \times 100) \%$

By further calculation

=  $240/6 \%$

= 40 %

Hence, the maximum mark is 600 and the percentage of pass marks is 40%.

## EXERCISE 7.2

1. Find the profit or loss percentage, when:

(i) C.P. = ₹ 400, S.P. = ₹ 468

(ii) C.P. = ₹ 13600, S.P. = ₹ 12104

**Solution:**

(i) It is given that

C.P. = ₹ 400, S.P. = ₹ 468

Profit = S.P. – C.P.

Substituting the values

$$= 468 - 400$$

$$= ₹ 68$$

Here

Profit % = (Profit × 100)/ C.P.

Substituting the values

$$= (68 \times 100)/ 400$$

$$= 17 \%$$

(ii) It is given that

C.P. = ₹ 13600, S.P. = ₹ 12104

Loss = C.P. – S.P.

Substituting the values

$$= 13600 - 12104$$

$$= ₹ 1496$$

Here

Loss % = [Loss/C.P. × 100] %

Substituting the values

$$= [1496/ 13600 \times 100] \%$$

So we get

$$= 1496/ 136 \%$$

$$= 11 \%$$

2. By selling an article for ₹ 1636.25, a dealer gains ₹ 96.25. Find his gain per cent.

**Solution:**

It is given that

S.P. of an article = ₹ 1636.25

Gain = ₹ 96.25

So the C.P. = S.P. – Gain

Substituting the values

$$= 1636.25 - 96.25$$

$$= ₹ 1540$$

We know that

Gain % = [Gain/ C.P. × 100] %

Substituting the values

$$= [96.25/1540 \times 100] \%$$

By further calculation

$$= 9625/1540 \%$$

$$= 1925/308 \%$$

So we get

$$= 25/4 \%$$

$$= 6 \frac{1}{4} \%$$

**3. By selling an article for ₹ 770, a man incurs a loss of ₹ 110. Find his loss percentage.**

**Solution:**

It is given that

$$\text{S.P. of an article} = ₹ 770$$

$$\text{Loss} = ₹ 110$$

We know that

$$\text{C.P.} = \text{S.P.} + \text{Loss}$$

Substituting the values

$$= 770 + 110$$

$$= ₹ 880$$

Here

$$\text{Loss \%} = [\text{Loss} / \text{C.P.} \times 100] \%$$

Substituting the values

$$= [110 / 880 \times 100] \%$$

By further calculation

$$= 100/8 \%$$

So we get

$$= 25/2 \%$$

$$= 12.5 \%$$

**4. Rashida bought 25 dozen eggs at the rate of ₹ 9.60 per dozen. 30 eggs were broken in the transaction and she sold the remaining eggs at one rupee each. Find her gain or loss percentage.**

**Solution:**

It is given that

$$\text{C.P. of one dozen eggs} = ₹ 9.60$$

$$\text{C.P. of 25 dozen eggs} = 25 \times 9.60 = ₹ 240$$

$$\text{No. of eggs} = 25 \text{ dozen} = 25 \times 12 = 300$$

$$\text{No. of eggs broken in transaction} = 30$$

$$\text{No. of remaining eggs} = 300 - 30 = 270$$

We know that

$$\text{S.P. of one egg} = ₹ 1$$

$$\text{S.P. of 270 eggs} = 1 \times 270 = ₹ 270$$

So the profit = S.P. - C.P.

Substituting the values

$$= 270 - 240$$

$$= ₹ 30$$

Here

$$\begin{aligned}\text{Profit \%} &= [\text{Profit/ C.P.} \times 100] \% \\ \text{Substituting the values} \\ &= [30/240 \times 100] \% \\ \text{So we get} \\ &= 100/8 \% \\ &= 25/2 \% \\ &= 12.5 \%\end{aligned}$$

**5. The cost of an article was ₹ 20000 and ₹ 1400 were spent on its repairs. If it is sold for a profit of 20 %, find the selling price of the article.**

**Solution:**

It is given that  
Cost of an article = ₹ 20000  
Cost of its repair = ₹ 1400  
So the total cost = 20000 + 1400 = ₹ 21400  
Profit = 20 %

We know that  
$$\text{S.P.} = [\text{C.P.} \times (100 + \text{Profit \%})] / 100$$
  
Substituting the values  
$$= [21400 \times (100 + 20)] / 100$$
  
By further calculation  
$$= (21400 \times 120) / 100$$
  
$$= ₹ 25680$$

**6. A shopkeeper buys 200 bicycles at ₹ 1200 per bicycle. He spends ₹ 30 per bicycle on transportation. He also spends ₹ 4000 on advertising. Then he sells all the bicycles at ₹ 1350 per piece. Find his profit or loss. Also, calculate it as a percentage.**

**Solution:**

It is given that  
C.P. of one bicycle = ₹ 1200  
C.P. of 200 bicycle =  $1200 \times 200 = ₹ 240000$   
Expenditure on transportation for one bicycle = ₹ 30  
Expenditure on transportation for 200 bicycle =  $30 \times 200 = ₹ 6000$   
Expenditure on advertising = ₹ 4000

We know that  
Net C.P. of the bicycle =  $240000 + 6000 + 4000$   
$$= ₹ 250000$$
  
S.P. of 200 bicycle at ₹ 1350 per bicycle =  $200 \times 1350$   
$$= ₹ 270000$$

So profit = S.P – C.P.  
Substituting the values  
$$= 270000 - 250000$$
  
$$= ₹ 20000$$

Here  
Profit % = [Profit/ C.P. × 100] %

Substituting the values  
=  $[20000/250000 \times 100] \%$   
So we get  
=  $200/25 \%$   
=  $8\%$

**7. The cost price of an article is 90% of its selling price. Find his profit percentage.**

**Solution:**

Consider ₹ x as the S.P. of an article  
C.P. of an article = 90% of ₹ x  
It can be written as  
=  $90/100 \times ₹ x$   
= ₹  $9x/10$

We know that  
Profit = S.P. – C.P.  
Substituting the values  
=  $x - 9x/10$   
Taking LCM  
=  $(10x - 9x)/10$   
= ₹  $x/10$

Here

Profit % =  $[\text{Profit}/\text{C.P.} \times 100] \%$

Substituting the values  
=  $[x/10/9x/10 \times 100] \%$

It can be written as  
=  $[x/10 \times 10/9x \times 100] \%$

So we get  
=  $100/9 \%$   
=  $11 \frac{1}{9} \%$

**8. Rao bought notebooks at the rate of 4 for ₹ 35 and sold them at the rate of 5 for ₹ 58. Calculate (i) his gain percentage.**

**(ii) the number of notebooks he should sell to earn a profit of ₹ 171.**

**Solution:**

Consider the number of note books bought = 20

Here the LCM of 4 and 5 is 20

C.P. of the note books =  $35/4 \times 20$   
=  $35 \times 5$   
= ₹ 175

S.P. of the note books =  $58/5 \times 20$   
=  $58 \times 4$   
= ₹ 232

(i) We know that

Gain = S.P. – C.P.

Substituting the values

$$= 232 - 175$$
$$= ₹ 57$$

Here

$$\text{Gain \%} = [\text{Gain} / \text{C.P.} \times 100] \%$$

Substituting the values

$$= [57 / 175 \times 100] \%$$

By further calculation

$$= [57/7 \times 4] \%$$

So we get

$$= 228/7 \%$$

$$= 32 \frac{4}{7} \%$$

(ii) When the profit is ₹ 57, the number of note books sold = 20

When the profit is ₹ 1, the number of note books sold =  $20/57$

$$\begin{aligned} \text{When the profit is ₹ 171, the number of note books sold} &= 20/57 \times 171 \\ &= 20 \times 3 \\ &= 60 \end{aligned}$$

**9. A vendor buys bananas at 3 for a rupee and sells at 4 for a rupee. Find his profit or loss percentage.**

**Solution:**

Consider the number of bananas bought = 12

Here LCM of 3 and 4 is 12

We know that

$$\text{C.P. of bananas} = 1/3 \times 12 = ₹ 4$$

$$\text{S.P. of bananas} = 1/4 \times 12 = ₹ 3$$

Here

$$\text{Loss} = \text{C.P.} - \text{S.P.}$$

Substituting the values

$$= 4 - 3$$

$$= ₹ 1$$

$$\text{Loss \%} = [\text{Loss} / \text{C.P.} \times 100] \%$$

Substituting the values

$$= [1/4 \times 100] \%$$

So we get

$$= 100/4 \%$$

$$= 25 \%$$

**10. A shopkeeper buys a certain number of pens. If the selling price of 5 pens is equal to the cost price of 7 pens, find his profit or loss percentage.**

**Solution:**

Consider ₹ x as the C.P. of 7 pens

$$\text{C.P. of 1 pen} = ₹ x/7$$

Based on the question

$$\begin{aligned}\text{S.P. of 5 pens} &= ₹ x \\ \text{S.P. of 1 pen} &= ₹ x/5\end{aligned}$$

$$\begin{aligned}\text{Profit} &= \text{S.P.} - \text{C.P.} \\ \text{Substituting the values} \\ &= x/7 - x/5 \\ \text{Taking LCM} \\ &= (7x - 5x)/35 \\ &= ₹ 2x/35\end{aligned}$$

$$\begin{aligned}\text{We know that} \\ \text{Profit \%} &= \text{Profit/C.P.} \times 100 \% \\ \text{Substituting the values} \\ &= 2x/35 / x/7 \times 100 \% \\ \text{It can be written as} \\ &= 2x/35 \times 7/x \times 100 \% \\ \text{By further calculation} \\ &= 2/5 \times 100 \% \\ \text{So we get} \\ &= 2 \times 20 \% \\ &= 40 \%\end{aligned}$$

**11. Find the selling price, when:**

**(i) Cost price = ₹ 2360, Profit = 8 %**

**(ii) Cost price = ₹ 380, Loss = 7.5 %**

**Solution:**

$$\begin{aligned}\text{(i) It is given that} \\ \text{Cost price} &= ₹ 2360, \text{ Profit} = 8\% \\ \text{We know that} \\ \text{S.P.} &= (100 + \text{Profit \%})/100 \times \text{C.P.} \\ \text{Substituting the values} \\ &= (100 + 8)/100 \times 2360 \\ \text{By further calculation} \\ &= 108/100 \times 2360 \\ \text{So we get} \\ &= 108/10 \times 236 \\ &= ₹ 2548.80\end{aligned}$$

$$\begin{aligned}\text{(ii) It is given that} \\ \text{Cost price} &= ₹ 380, \text{ Loss} = 7.5 \% \\ \text{We know that} \\ \text{S.P.} &= (100 - \text{Loss \%})/100 \times \text{C.P.} \\ \text{Substituting the values} \\ &= (100 - 7.5)/100 \times 380 \\ \text{By further calculation} \\ &= 92.5/100 \times 380 \\ \text{So we get} \\ &= 9.25 \times 38 \\ &= ₹ 351.50\end{aligned}$$

12. A dealer bought a number of eggs at ₹ 18 a dozen and sold them at 50% profit. Find the selling price per egg.

**Solution:**

It is given that

C.P. of one dozen eggs = 12 eggs = ₹ 18

Profit = 50%

We know that

S.P. of 12 eggs =  $[1 + 50/100]$  of ₹ 18

It can be written as

=  $(150/100 \times 18)$

By further calculation

=  $(3/2 \times 18)$

So we get

=  $3 \times 9$

= ₹ 27

S.P. of 1 egg = ₹  $27/12$

So we get

= ₹  $9/4$

= ₹ 2.25

### EXERCISE 7.3

**1. Find the discount and the selling price, when:**

**(i) the marked price = ₹ 575, discount = 12%**

**(ii) the printed price = ₹ 12750, discount =  $8\frac{1}{3}\%$**

**Solution:**

(i) the marked price = ₹ 575, discount = 12%

Here

Amount of discount = 12 % of ₹ 575

It can be written as

$$= (12/100 \times 575)$$

By further calculation

$$= (12/4 \times 23)$$

So we get

$$= 3 \times 23$$

$$= ₹ 69$$

We know that

Net sale price = M.P. – discount

Substituting the values

$$= 575 - 69$$

$$= ₹ 506$$

(ii) the printed price = ₹ 12750, discount =  $8\frac{1}{3}\% = \frac{25}{3}\%$

Here

Amount of discount =  $\frac{25}{3}\%$  of ₹ 12750

It can be written as

$$= [25/ (3 \times 100) \times 12750]$$

By further calculation

$$= (25/30 \times 1275)$$

So we get

$$= (5/6 \times 1275)$$

$$= ₹ 1062.50$$

We know that

Net sale price = M.P. – discount

Substituting the values

$$= 12750 - 1062.50$$

$$= ₹ 11687.50$$

**2. Find the discount and the discount percentage, when:**

**(i) marked price = ₹ 780, selling price = ₹ 721.50**

**(ii) advertised price = ₹ 28500, selling price = ₹ 24510**

**Solution:**

(i) marked price = ₹ 780, selling price = ₹ 721.50

We know that

Discount = M.P. – Selling price

Substituting the values

$$= 780 - 721.50 \\ = ₹ 58.50$$

Here

$$\text{Discount \%} = [\text{Discount}/\text{M.P.} \times 100] \%$$

Substituting the values

$$= [58.50/780 \times 100] \%$$

By further calculation

$$= 5850/780 \%$$

So we get

$$= 585/78 \%$$

$$= 7.5 \%$$

(ii) advertised price = ₹ 28500, selling price = ₹ 24510

We know that

$$\text{Discount} = \text{Advertised price} - \text{Selling Price}$$

Substituting the values

$$= 28500 - 24510$$

$$= ₹ 3990$$

Here

$$\text{Discount \%} = [\text{Discount}/ \text{advertised price} \times 100] \%$$

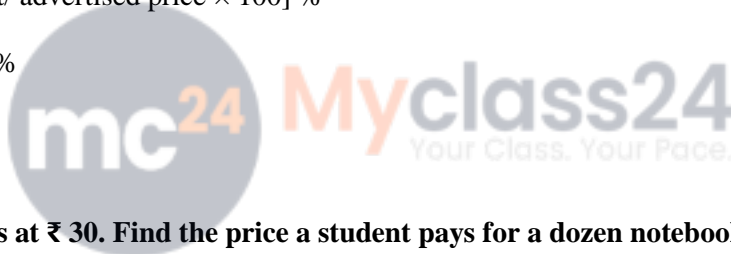

Substituting the values

$$= [3990/ 28500 \times 100] \%$$

So we get

$$= 3990/ 285 \%$$

$$= 14 \%$$

**3. A notebook is marked at ₹ 30. Find the price a student pays for a dozen notebooks if he gets 15% discount.  
Solution:**

It is given that

$$\text{M.P. of one notebook} = ₹ 30$$

$$\text{M.P. of one dozen notebooks} = 30 \times 12 = ₹ 360$$

$$\text{Discount} = 15\%$$

We know that

$$\text{Amount of discount} = 15\% \text{ of M.P.}$$

It can be written as

$$= 15\% \text{ of ₹ 360}$$

By further calculation

$$= (15/100 \times 360)$$

So we get

$$= (15/10 \times 36)$$

$$= (3/2 \times 36)$$

On further simplification

$$= 3 \times 18$$

$$= ₹ 54$$

$$\text{Price a student pays for a dozen notebooks} = 360 - 54 = ₹ 306$$

**4. A dealer gave 9% discount on an electric fan and charges ₹ 728 from the customer. Find the marked price of the fan.**

**Solution:**

Consider ₹  $x$  as the M.P. of the fan

Discount = 9%

We know that

Amount of discount = 9% of ₹  $x$

It can be written as

$$= \frac{9}{100} \times x$$

$$= ₹ \frac{9x}{100}$$

Here

Charges for customer = ₹  $x - ₹ \frac{9x}{100}$

Substituting the values

$$728 = \frac{(100x - 9x)}{100}$$

By further calculation

$$728 = \frac{91x}{100}$$

So we get

$$x = \frac{(728 \times 100)}{91}$$

$$x = 8 \times 100$$

$$x = 800$$

Therefore, the marked price of the fan is ₹ 800.

**5. The list price of an article is ₹ 800 and a dealer is selling it at a discount of 20 %. Find:**

**(i) the selling price of the article.**

**(ii) the cost price of the article if he makes 25% profit on selling it.**

**Solution:**

(i) It is given that

M.P. = ₹ 800

Discount = 20%

We know that

S.P. =  $[1 - \frac{d}{100}]$  of M.P.

Substituting the values

$$S.P. = [1 - \frac{20}{100}] \text{ of ₹ } 800$$

By further calculation

$$S.P. = \frac{80}{100} \times 800$$

$$S.P. = ₹ 640$$

Therefore, the selling price is ₹ 640.

(ii) It is given that

S.P. = ₹ 640

Profit = 25%

We know that

$$S.P. = [1 + P/100] \text{ of C.P.}$$

Substituting the values

$$640 = [1 + 25/100] \text{ of C.P.}$$

By further calculation

$$640 = 125/100 \text{ of C.P.}$$

So we get

$$C.P. = [640 \times 100/125]$$

$$C.P. = 128 \times 4$$

$$C.P. = ₹ 512$$

**6. A shopkeeper marks his goods at such a price that would give him a profit of 10% after allowing a discount of 12%. If an article is marked at ₹ 2250, find its:**

**(i) selling price**

**(ii) cost price.**

**Solution:**

(i) It is given that

$$M.P. \text{ of an article} = ₹ 2250$$

$$\text{Discount} = 12 \%$$

We know that

$$S.P. = [1 - d/100] \text{ of M.P.}$$

Substituting the values

$$S.P. = [1 - 12/100] \text{ of ₹ 2250}$$

By taking LCM

$$S.P. = (100 - 12)/100 \times 2250$$

By further calculation

$$S.P. = 88/100 \times 2250$$

So we get

$$S.P. = 88/4 \times 90$$

$$S.P. = 22 \times 90$$

$$S.P. = ₹ 1980$$

(ii) It is given that

$$S.P. = ₹ 1980$$

$$\text{Profit} = 10\%$$

We know that

$$S.P. = [1 + P/100] \text{ of C.P.}$$

Substituting the values

$$1980 = [1 + 10/100] \text{ of C.P.}$$

By further calculation

$$1980 = 110/100 \text{ of C.P.}$$

So we get

$$C.P. = 1980 \times 100/110$$

$$C.P. = 18 \times 100$$

$$C.P. = ₹ 1800$$

Therefore, the cost price is ₹ 1800.

**7. A shopkeeper purchased a calculator for ₹ 650. He sells it at a discount of 20% and still makes a profit of 20%. Find:**

**(i) the selling price**

**(ii) marked price**

**Solution:**

(i) It is given that

$$\text{C.P.} = ₹ 650$$

$$\text{Profit} = 20\%$$

We know that

$$\text{S.P.} = [1 + P/100] \text{ of C.P.}$$

Substituting the values

$$= [1 + 20/100] \times 650$$

By further calculation

$$= 120/100 \times 650$$

So we get

$$= 12 \times 65$$

$$= ₹ 780$$

Therefore, the selling price of the calculator is ₹ 780.

(ii) It is given that

$$\text{S.P.} = ₹ 780$$

$$\text{Discount} = 20\%$$

We know that

$$\text{S.P.} = [1 - d/100] \text{ of M.P.}$$

Substituting the values

$$780 = [1 - 20/100] \text{ of M.P.}$$

By further calculation

$$780 = 80/100 \text{ of M.P.}$$

It can be written as

$$\text{M.P.} = 780 \times 100/80$$

So we get

$$\text{M.P.} = 780 \times 10/8$$

$$\text{M.P.} = 7800/8$$

$$\text{M.P.} = ₹ 975$$

Therefore, the marked price of the calculator is ₹ 975.

**8. A shopkeeper buys a dinner set for ₹ 1200 and marks it 80% above the cost price. If he gives 15 % discount on it, find:**

**(i) the marked price**

**(ii) the selling price**

**(iii) his profit percentage.**

**Solution:**

(i) It is given that

$$\text{C.P. of a dinner set} = ₹ 1200$$

We know that

$$\text{M.P.} = 1200 + 80\% \text{ of } ₹ 1200$$

By further calculation

$$= 1200 + 80/100 \times 1200$$

So we get

$$= 1200 + 80 \times 12$$

By multiplication

$$= 1200 + 960$$

$$= ₹ 2160$$

(ii) It is given that

$$\text{M.P.} = ₹ 2160$$

$$\text{Discount} = 15\%$$

We know that

$$\text{S.P.} = (1 - d/100) \text{ of M.P.}$$

Substituting the values

$$= (1 - 15/100) \times 2160$$

By further calculation

$$= 85/100 \times 2160$$

So we get

$$= 17/20 \times 2160$$

$$= 17 \times 108$$

$$= ₹ 1836$$

(iii) We know that

$$\text{Profit} = \text{S.P.} - \text{C.P.}$$

Substituting the values

$$= 1836 - 1200$$

$$= ₹ 636$$

Here

$$\text{Profit \%} = [\text{Profit}/\text{C.P.} \times 100] \%$$

Substituting the values

$$= (636/1200 \times 100) \%$$

By further calculation

$$= 636/12 \%$$

$$= 53 \%$$

**9. The cost price of an article is ₹ 1600, which is 20% below the marked price. If the article is sold at a discount of 16%, find:**

**(i) the marked price**

**(ii) the selling price**

**(iii) profit percentage.**

**Solution:**

(i) It is given that

$$\text{C.P.} = ₹ 1600$$

C.P of an article is 20% below the M.P.

Take ₹ x as the M.P. of an article

We know that

$$C.P. = M.P. - 20\% \text{ of } M.P.$$

Substituting the values

$$1600 = x - 20\% \text{ of } x$$

It can be written as

$$1600 = x - 20/100 \times x$$

By further calculation

$$1600 = 80x/100$$

So we get

$$x = 1600 \times 100/80$$

$$x = 20 \times 100$$

$$x = ₹ 2000$$

Therefore, the M.P. of an article is ₹ 2000.

(ii) It is given that

$$M.P. = ₹ 2000$$

$$\text{Discount} = 16\%$$

We know that

$$S.P. = [1 - 16/100] \text{ of } M.P.$$

Taking LCM

$$= (100 - 16)/100 \text{ of } ₹ 2000$$

By further calculation

$$= 84/100 \times 2000$$

So we get

$$= 84 \times 20$$

$$= ₹ 1680$$

(iii) It is given that

$$\text{Profit} = S.P. - C.P.$$

Substituting the values

$$= 1680 - 1600$$

$$= ₹ 80$$

We know that

$$\text{Profit \%} = [\text{Profit} / C.P. \times 100] \%$$

Substituting the values

$$= [80/1600 \times 100] \%$$

So we get

$$= 80/16 \%$$

$$= 5 \%$$

**10. A shopkeeper allows 20% discount on his goods and still earns a profit of 20%. If an article is sold for ₹ 360, find:**

**(i) the marked price**

**(ii) the cost price.**

**Solution:**

(i) It is given that

## ML Aggarwal Solutions for Class 8 Maths Chapter 7 - Percentage

Dealer allows a discount of 20%

$$\text{S.P.} = [1 - d/100] \text{ of M.P.}$$

Substituting the values

$$360 = [1 - 20/100] \text{ of M.P.}$$

By further calculation

$$360 = 80/100 \text{ of M.P.}$$

It can be written as

$$\text{M.P.} = 360 \times 100/80$$

$$\text{M.P.} = 360 \times 10/8$$

So we get

$$\text{M.P.} = 45 \times 10$$

$$\text{M.P.} = ₹ 450$$

(ii) Consider ₹ x as the C.P. of the article

Profit = 20%

$$\text{S.P.} = ₹ 360$$

We know that

$$\text{S.P.} = [1 + P/100] \text{ of C.P.}$$

Substituting the values

$$360 = [1 + 20/100] \text{ of } x$$

By further calculation

$$360 = [1 + 1/5] \text{ of } x$$

So we get

$$360 = 6x/5$$

By cross multiplication

$$x = 360 \times 5/6$$

$$x = 60 \times 5$$

$$x = ₹ 300$$

Therefore, the C.P. of the article is ₹ 300.

### EXERCISE 7.4

1. Find the buying price of each of the following when 5% S.T. is added on the purchase of

(i) a towel of ₹ 50

(ii) 5 kg of flour at ₹ 15 per kg.

**Solution:**

(i) It is given that

S.T. = 5%

Cost of towel = ₹ 50

We know that

$$\begin{aligned}\text{Total S.T.} &= (50 \times 5) / 100 \\ &= ₹ 2.50\end{aligned}$$

So the buying price =  $50 + 2.50 = ₹ 52.50$

(ii) We know that

$$\begin{aligned}\text{C.P. of 5 kg of flour at the rate of ₹ 15 per kg} &= 15 \times 5 \\ &= ₹ 75\end{aligned}$$

Rate of S.T. = 5%

Here

$$\text{Total tax} = (75 \times 5) / 100$$

So we get

$$= 375 / 100$$

$$= ₹ 3.75$$

So the total price of the flour =  $75 + 3.75 = ₹ 8.75$

2. If 8% of VAT is included in the prices, find the original price of

(i) a TV bought for ₹ 13500

(ii) a shampoo bottle bought for ₹ 180.

**Solution:**

(i) It is given that

Total price of TV including VAT = ₹ 13500

Rate of VAT = 8%

We know that

$$\text{Original price of TV} = (13500 \times 100) / (100 + 8)$$

By further calculation

$$= (13500 \times 100) / 108$$

$$= ₹ 12500$$

(ii) It is given that

Total cost of shampoo bottle including VAT = ₹ 180

Rate of VAT = 8%

We know that

Original price of shampoo =  $(180 \times 100) / (100 + 8)$

By further calculation

$$= (180 \times 100) / 108$$

So we get

$$= 500/3$$

$$= ₹ 166.67$$

**3. Utkarsh bought an AC for ₹ 34992 including a VAT of 8%. Find the price of AC before VAT was added.**

**Solution:**

It is given that

Cost of AC including VAT = ₹ 34992

Rate of VAT charged = 8%

We know that

Original price of AC =  $(34992 \times 100) / (100 + 8)$

By further calculation

$$= (34992 \times 100) / 108$$

$$= ₹ 32400$$

**4. Gaurav bought a shirt for ₹1296 including VAT. If the original price of the shirt is ₹ 1200, find the rate of VAT.**

**Solution:**

It is given that

Cost of shirt including VAT = ₹ 1296

Original price of shirt = ₹ 1200

We know that

Amount of VAT =  $1296 - 1200 = ₹ 96$

Here

Rate of VAT =  $(\text{VAT} \times 100) / \text{C.P.}$

Substituting the values

$$= (96 \times 100) / 1200$$

$$= 8 \%$$

**5. Anjana buys a purse for ₹ 523.80 including 8% VAT. Find the new selling price of the purse if VAT increases to 10%.**

**Solution:**

It is given that

Total C.P. of purse including VAT = ₹ 523.80

Rate of VAT = 8%

We know that

Actual cost of the purse =  $(523.80 \times 100) / (100 + 8)$

By further calculation

$$= (523.80 \times 100) / 108$$

$$= ₹ 485$$

Here

New rate of VAT = 10%

Amount of VAT =  $485 \times 10/100$

So we get

$$= 4850/100$$

$$= ₹ 48.50$$

So the total cost of the purse =  $485 + 48.50 = ₹ 535.50$

**6. A wall hanging is marked for ₹ 4800. The shopkeeper offers 10% discount on it. If VAT is received 8% from the customer, find the amount paid by the customer to purchase the wall hanging.**

**Solution:**

It is given that

Marked price of wall hanging = ₹ 4800

Discount offered = 10%

We know that

Net sale price =  $[4800 \times (100 - 10)/ 100]$

By further calculation

$$= (4800 \times 90)/ 100$$

$$= ₹ 4320$$

Here

Rate of VAT charged = 8%

So the sale price including VAT =  $[4320 \times (100 + 8)/ 100]$

By further calculation

$$= (4320 \times 108)/ 100$$

$$= 466560/100$$

$$= ₹ 4665.60$$

**7. Amit goes to a shop to buy a washing machine. The marked price of the washing machine is ₹ 10900 excluding 9% VAT. Amit bargains with the shopkeeper and convinces him for ₹ 10900 including VAT as the final cost of the washing machine. Find the amount reduced by the shopkeeper.**

**Solution:**

It is given that

M.P. of washing machine = ₹ 10900

Rate of VAT = 9%

Consider ₹ x as the reduced price of machine

We know that

VAT at the rate of 9% =  $x \times 9/100 = ₹ 9x/100$

So the amount paid =  $x + 9x/100 = 109x/100$

By equating the values

$$109x/100 = 10900$$

By further calculation

$$x = (10900 \times 100)/ 109$$

$$x = 10000$$

**ML Aggarwal Solutions for Class 8 Maths Chapter 7 -  
Percentage**

$$\begin{aligned}\text{Amount reduced by the shopkeeper} &= 10900 - 10000 \\ &= ₹ 900\end{aligned}$$

Therefore, the amount reduced by the shopkeeper is ₹ 900.
