

# Chapter 9

## Ex 9.1

### *Ratio Proportion and Unitary Method*

## VI 9. Ratio, Proportion and Unitary Method.

Solution-01

(i) Ratio of number of girls to that of boys in the merit list is  $2:1$ .

(ii) Ratio of number of students passing a mathematics test to that of total students appearing in test is  $2:3$ .

Solution-02:-

(i) The number of bad pencils produced in a factory is  $\frac{1}{9}$  of the number of good pencils produced in the factory.

(ii) The number of villages is 2000 times that of cities in India.

Solution-03:-

(i)  $60:72$

To express this ratio in the simplest form, we will have to find the H.C.F of 60 and 72.

It is 12.

Dividing each term of the ratio by the H.C.F of its terms i.e. 12, we get

$$\frac{60}{72} = \frac{60 \div 12}{72 \div 12} = \frac{5}{6} \text{ or } 5:6$$

Hence, the simplest form of the ratio  $60:72$  is  $5:6$ .

(ii)  $324 : 144$

To express this ratio in the simplest form, we will have to find the H.C.F of 324 & 144. It is 36.

Dividing each term of the ratio by the H.C.F of its terms i.e. ~~36~~, we get

$$\frac{324}{144} = \frac{324 \div 36}{144 \div 36} = \frac{9}{4}.$$

Hence, the simplest form of the ratio  $324 : 144$  is  $9 : 4$ .

(iii)  $85 : 391$ .

To express this ratio in the simplest form we will have to find the H.C.F of 85 and 391. It is 17.

Dividing each term of the ratio by the H.C.F of its terms i.e. 17, we get

$$\begin{aligned} \frac{85}{391} &= \frac{85 \div 5 (17)}{391 \div 5 (17)} \\ &= \frac{85 \cancel{\div 17}}{391 \cancel{\div 17}} = \frac{5}{23}. \end{aligned}$$

Hence, the simplest form of the ratio  $85 : 391$  is  $5 : 23$ .

(iv) 186 : 403.

The given ratio is  $186 : 403 = \frac{186}{403}$

To express this ratio in the simplest form, we will have to find the H.C.F of 186 and 403. It is 31.

Dividing each term of the ratio by the H.C.F of its terms i.e 31, we get

$$\frac{186}{403} = \frac{186 \div 31}{403 \div 31} = \frac{6}{23} \quad (186 \div 31 = 6)$$

Hence, the simplest form of the ratio 186 : 403 is 6 : 23.

Solution-04

$$\begin{aligned} \text{(i) } 75 \text{ paise to Rs } 3 &= 75 \text{ paise} : \text{Rs } 3 \\ &= 75 \text{ paise} : 300 \text{ paise} \\ &= 3 \cancel{\%} \cancel{V} 1 : 4. \end{aligned}$$

[ $\because$  1 Rs = 100 paise]

[dividing the first and second term by their H.C.F = 75]

(ii) 35 minutes to 45 minutes

$$= 35 \text{ min} : 45 \text{ min}$$

$$= 7 : 9 \quad [\text{Dividing the first and second term by their H.C.F} = 5]$$

(iii) 8 kg to 400 gm. = 8 kg : 400 gm

$$= 8000 \text{ gm} : 400 \text{ gm}$$

$$= 20 : 1.$$

[Dividing the first and second term by their H.C.F = 400]

(iv) 48 minutes to 1 hour. = 48 min : 1 hour

$$= 48 \text{ min} : 60 \text{ min}$$

$$[\because 1 \text{ hour} = 60 \text{ min}]$$

$$= 4 : 5.$$

[Dividing the first and second term by their H.C.F = 12]

(v) 2 meters to 35 cm. = 2 met : 35 cm

$$= 200 \text{ cm} : 35 \text{ cm}$$

$$[1 \text{ m} = 100 \text{ cm}]$$

$$= 40 : 7$$

[ $\therefore$  dividing the first and second term by their H.C.F = 5]

$$\begin{aligned}
 \text{(vi)} \quad 35 \text{ minutes to } 45 \text{ seconds} &= 35 \text{ min} : 45 \text{ sec} \\
 &= 2100 \text{ sec} : 45 \text{ sec} \\
 &= 140 : 3 \\
 &[\text{H.C.F} = 15]
 \end{aligned}$$

$$\begin{aligned}
 \text{(vii)} \quad 2 \text{ dozen to } 3 \text{ scores} &= 2 \text{ dozen} : 3 \text{ scores} \\
 &= 24 : 60
 \end{aligned}$$

$$\begin{aligned}
 [\because 1 \text{ dozen} &= 12 \\
 \text{Score} &= 20]
 \end{aligned}$$

$$= 2 : 5.$$

[Dividing the first and second term by their

H.C.F = 12].

$$\text{(viii)} \quad 3 \text{ weeks to } 3 \text{ days} = 3 \text{ weeks} : 3 \text{ days}$$

$$= 21 \text{ days} : 3 \text{ days}$$

$$[1 \text{ week} = 7 \text{ days}]$$

$$= 3 \times 7 : 3$$

$$= 7 : 1.$$

$$\text{(ix)} \quad 48 \text{ min to } 2 \text{ hours } 40 \text{ min} = 48 \text{ min} : 160 \text{ min}$$

$$[\because 1 \text{ hour} = 60 \text{ min}]$$

$$= 3 : 10$$

[ $\because$  dividing the first and second term by their H.C.F = 3 : 10]

$$\begin{aligned} \text{(X) } 3\text{m } 5\text{cm to } 35\text{cm} &= 3\text{m}5\text{cm} : 35\text{cm} \\ &= 305\text{cm} : 35\text{cm} \end{aligned}$$

[Dividing the first and second term by their H.C.F = 5]

$$= 61:7$$

Solution-05:-

$$\begin{aligned} \text{(I) } 3.2\text{ meters to } 56\text{ meters} &= 3.2 : 56 \\ &= 2 : 35 \end{aligned}$$

[Dividing the first and second term by their H.C.F = 1.6]

$$\begin{aligned} \text{(II) } 10\text{ meters to } 25\text{cm} &= 10\text{met} : 25\text{cm} \\ &= 1000\text{cm} : 25\text{cm} \end{aligned}$$

$$= 40:1$$

$$[\text{H.C.F} = 25]$$

$$\begin{aligned} \text{(III) } 25\text{ paise to Rs } 60 &= 25\text{ paise} : 60\text{ Rs} \\ &= 25\text{ paise} : 6000\text{ paise} \end{aligned}$$

$$= 1:240$$

$$[\because \text{H.C.F} = 25\text{ paise}]$$

$$\text{(IV) } 10\text{ litres to } 0.25\text{ litres} = 10 : 0.25$$

$$= 40:1$$

$$[\because \text{H.C.F} = 0.25]$$

Solution-06:

The number of boys = 1168.

The number of girls = 1095.

$$\begin{aligned} \text{The number of boys to The number of girls} \\ = \frac{1168}{1095} \end{aligned}$$

[ Dividing the Nr & Dr by their H.C.F = 73 ]

Solution-07:-

(i) Given that,

Avinash Salary = Rs 12,000 per month.

Wife Salary = Rs 15,000 per month.

$$\begin{aligned} \text{Avinash's income to wife income} &= \frac{\text{Rs } 12,000}{\text{Rs } 15,000} \\ &= \frac{4}{5} \end{aligned}$$

① Total income = 27,000 per month.

Avinash's income to the Total

$$\text{income} = \frac{\text{Rs } 12,000}{\text{Rs } 27,000}$$

$$= \frac{4}{9}$$

on-08:

Total no. of workers = 72.

$$\text{women} = 28$$

$$\begin{aligned}\text{women} &= 72 - 28 \\ &= 44.\end{aligned}$$

men to that of women =  $28 : 44$

$$= \frac{28 \div 4}{44 \div 4}$$

$$= \frac{7}{11}$$

[H.C.F = 4]

men to the total no. of person =  $\frac{28 \div 4}{72 \div 4}$

$$= \frac{7}{18}$$

persons to women =  $\frac{72}{44}$

$$= \frac{72 \div 4}{44 \div 4}$$

$$= \frac{18}{11}.$$

Solution-09:-

Length of steel tape = 10 m

width = 2.4 cm.

$$\begin{aligned}\text{ratio of its length and width} &= \frac{10\text{m}}{2.4\text{cm}} \\ &= \frac{1000\text{cm}}{2.4\text{cm}} \\ &= \frac{1250}{3}\end{aligned}$$

[HCF = 0.8 cm]

Solution-10:

Total period office = 9 a.m to 5 p.m  
= 8 hours.

Lunch interval = 30 min

$$\begin{aligned}\text{Ratio} &= \frac{30}{8 \times 60 \text{ mins}} \\ &= \frac{30}{480} \\ &= \frac{30 \div 30}{480 \div 30} \\ &= \frac{1}{16}\end{aligned}$$

Solution-11.

bullock-cart travels 24 km in 3 hours

Train travels 120 km in 2 hours

bullock-cart travels  $\frac{24 \text{ km}}{3}$  in One hour

i.e 8 km.

Train travels  $\frac{120}{2}$  km in one hour

i.e 60 km.

$$\therefore \text{Ratio} = \frac{8 \div 4}{60 \div 4}$$

Solution-12

Myclass24  
Your Class. Your Pace.

Margarette earns - 955 per

savings - 185 per month

$$\begin{aligned} \text{expenditure} &= 955 - 185 \\ &= 770 \end{aligned}$$

$$\begin{aligned} \text{(i) her savings to her income} &= \frac{185 \div 5}{955 \div 5} \\ &= \frac{37}{191} \end{aligned}$$

$$\text{(ii) her income to her expenditure} = \frac{955}{770} = \frac{191}{154}$$

$$\text{(iii) her savings to her expenditure} = \frac{185}{770} = \frac{37}{154}$$
